Medicare meltdown averted as physician payment bill passed

After a sustained campaign by the AOA and a national coalition of patient and provider groups, the Medicare Improvements for Patients and Providers Act of 2008 (H.R. 6331) has become law following votes in Congress July 15 to override President Bush’s veto.

The AOA-backed bill averts a massive cut in Medicare physician reimbursement over the next 18 months and provides positive payment updates through 2009 to be funded through reductions in subsidies to Medicare Advantage plans. The measure also contains an important provision that blocks implementation of an unfair and expensive Durable Medical Equipment Prosthetics, Orthotics and Supplies (DMEPOS) accreditation regulation that the AOA has strongly opposed.

The AOA Board of Trustees, leaders and staff of state optometric associations, Advocacy Group volunteers, federal Keypersons and AOA-PAC supporters were central to optometry’s successful effort to be heard on Capitol Hill on the urgent Medicare payment, DME and other issues this important legislation affects.

“The AOA Washington office extends thanks to all the doctors, students and staff who contacted members of Congress at key times during the legislative process,” said Jon Hymes, AOA Washington office director.

A summary of key provisions of the Medicare Patients and Providers Improvements

AOA hires ‘prestigious’ national law firm to represent association

Citing the need for wide-ranging legal expertise, the AOA announced July 29 that it has hired national law firm Stinson Morrison Hecker LLP, as general counsel for the association.

In this new arrangement, “the AOA will have access to the broad expertise of a full-service national law firm,” said AOA President Pete Kehoe, O.D. Wayne Henry, a partner with the firm, will be serving as external general counsel for the AOA. Additional legal expertise will be provided by the firm’s offices in the Midwest and Washington, D.C.

“The entire AOA management team is supportive of this move and appreciates the benefits of access to the specialized expertise of such a prestigious firm,” Dr. Kehoe said.

“During my first several years on the AOA board, we

AOA, VSP team up to raise awareness of need for eye exams

Covering 29 cities in just a few hours, Bill Nye the Science Guy and Leonard Press, O.D., appeared live on TV and radio stations as part of a satellite media tour July 31. The “tour” included multiple national outlets.

They used the opportunity to discuss the importance of eye examinations before school begins and to urge parents to visit mychildsvision.com.

The site, jointly hosted by the AOA and Vision Service Plan (VSP), includes an Eye Care Discovery Activity Guide and questions and answers about topics such as school vision

How often should you see the dentist?

If you asked any parent, and most adults, in America that question, I’m sure nine out of 10 would say “every six months.”

Our colleagues at the American Dental Association (ADA) have spread that message since 1956 when “look ma, no cavities” debuted in cooperation with toothpaste manufacturers. Their underlying message was that “clean teeth were healthier teeth” and that call to action was a six-month checkup cycle to prevent tooth decay or worse, tooth loss. This single “every six months” educational campaign has endured 40 years and is the main reason that when parents in America are surveyed, they know the answer is: “six months to ensure good dental health” for their children and most adults.

While we all know, sometimes firsthand, the painful consequences of NOT going to the dentist, I think the ADA (and the individual dentist) has done something more than scaring people into dental offices. Their profession has been a leader in letting people know that preventive care, and regular check-ups, is the right thing to do.

We need your help so 90 percent of Americans know the answer to the question: “How often should I see my optometrist?”

The AOA has been successful in getting the word out about how important eye exams are for a lifetime of healthy vision. Awareness of the consequences of skipping visits to the eye doctor through the AOA’s American Eye-Q® survey and other awareness campaigns, such as reaching out to the “mommy bloggers.” We are educating people that amblyopia, glaucoma and other eye diseases are treatable — if caught early.

The public has picked up on the AOA’s message that contact lenses are not cosmetics, and problems can be avoided by regular trips to their optometrist and listening to the doctor’s recommendations.

Since it’s back-to-school time and usually mom is the health care decision-maker for the entire family, let’s start with children who aren’t at risk: The AOA guidelines recommend an exam at 6 months (please sign up and promote our InfantSEE® program), another at age 3, another before the child starts school and (at least) every two years thereafter.

For adults not at risk, the guidelines recommend an exam every two years — or as the OD recommends — until age 61, when annual eye exams are recommended.

American Optometric Association News (ISSN: 0094-9620) is published 18 times per year by Elsevier Inc., 360 Park Avenue South, New York, NY 10010. Dr. Kehoe

The guidelines define “at risk” to include patients with diabetes, hypertension, a family history of ocular disease, or whose clinical findings increase their potential risk; those working in occupations that are highly demanding visually (like students) or are eye hazardous; those taking prescription or nonprescription drugs with ocular side effects; those wearing contact lenses; those who have had eye surgery; and those with other health concerns or conditions.

It’s our job as health professionals to educate our patients on what they need to do to enjoy a lifetime of healthy vision.
This physician payment “fix” will increase Medicare reimbursement to optometrists by approximately $160 million over the next 18 months. In addition, third-party payer fee schedules that are tied to Medicare rates should rise.

The law also requires the Centers for Medicare & Medicaid Services (CMS) to publicize the names of doctors and practices who are participating in the Physician Quality Reporting Initiative (PQRI).

T

The Armed Forces Optometric Society (AFOS) and the AOA worked together to get the nation’s largest online contact lens retailer to discontinue its practice of selling contact lenses to servicemen and women overseas without requiring prescription verification.

In response to a letter from AFOS President Lt. Col. Daniel E. Reiser, O.D., 1-800 Contacts not only took a Web site icon advertising the service down, but changed its policy of selling to Army Post Office (APO) or Fleet Post Office (FPO) addresses.

The policy of offering overseas military personnel the option to purchase contact lenses without a valid prescription is in violation of the federal Fairness to Contact Lens Consumers Act (FCLCA). The 1-800 Contacts Web site icon, when selected, stated that APO/FPO orders do not require contact lens prescription verification.

APO and FPO addresses are used to deliver mail through the Overseas Military Mail system established by the Department of Defense in cooperation with the U.S. Postal Service.

“ar this representation appears to release your company from its legal obligation to verify prescriptions under the current U.S. law. As you know, the intent of this safety provision in the FCLCA is to ensure that a patient’s prescription is current and accurate and that the patient will not be harmed by filling it,” wrote Dr. Reiser in the letter to 1-800 Contacts.

1-800 Contacts removed the icon from its Web site shortly after receiving the letter from AFOS objecting to the company’s policy of providing lenses without prescription to U.S. citizens at APO or FPO addresses, but AFOS was only recently informed of the change in policy.

“This is a good example of AFOS leadership working hand-in-hand with the AO leadership and staff to do what is right for our federal service patients,” said Steven R. Sem, O.D., executive director of AFOS. “The results speak volumes about what we can get done if we work together.”

Dr. Sem, a retired U.S. Air Force colonel, said the policy actually placed military personnel and their dependents at risk of potentially serious eye problems.

Contact lens wear in the sometimes adverse environments encountered by overseas military personnel requires the periodic eye examination that the FCLCA contact lens prescription requirements are designed to ensure, he said.

In addition to raising concerns regarding the eye health of military personnel, the retailer’s practice of providing lenses through the overseas military mail, without prescription, serves to spotlight potential dangers related to the sale of lenses outside the country as well as jurisdictional issues regarding the FCLCA, Dr. Sem said.

The AOA helped organize a meeting to discuss the FCLCA and 1-800 Contacts’ overseas sales policy with representatives from AFOS, the American Academy of Ophthalmology and the AOA at the Federal Trade Commission office in Washington, D.C.

“I have been very impressed with the AOA’s support to AFOS in addressing this potentially sight-threatening issue and furthering our AFOS mission of advancing, improving, and enhancing the eye care of designated federal service health care beneficiaries,” said Dr. Reiser.
AOA thanks Chairman Dingell for role in averting meltdown

Rep. John Dingell (D-Mich.), chairman of the Energy and Commerce Committee and the longest-serving member of the U.S. House of Representatives, was presented with the AOA Health Care Leadership Award by Jon Hymes, AOA Washington office director. Rep. Dingell led the successful effort in Congress this month to avert massive cuts in Medicare physician payments and helped guide the AOA-backed Vision Care for Kids Act to House passage last October. Unfortunately, “priority” legislation, the Vision Care for Kids Act, fell short in a U.S. Senate vote.

Although optometry has helped to ensure that children’s vision and learning have been recognized as a health care priority in the 110th Congress, it appears that a final push this year to enact the AOA-backed Vision Care for Kids Act (H.R. 507) has fallen short due to deep partisan differences.

In a key procedural vote on July 28, the U.S. Senate voted against considering the Advancing America’s Priorities Act (S. 3297), a package of 35 bills with bipartisan support that have stalled this year in the Senate after winning approval in the U.S. House, including H.R. 507.

Prior to the vote, a number of senators who planned to oppose S. 3297 informed the AOA Washington office or their local optometrists of their strong support for children’s vision legislation and H.R. 507.

However, they also detailed procedural concerns and their view of other provisions of the broader bill as wasteful or unnecessary. In the end, the Senate vote fell almost entirely along party lines.

It is notable that at the urging of the AOA, the Vision Care for Kids Act was among a group of just six health care bills selected by Senate Majority Leader Harry Reid (D-Nev.) for inclusion in S. 3297. Health care provisions of the Advancing America’s Priorities Act (S. 3297) included:

- The Vision Care for Kids Act (H.R. 507 / S. 1117), backed by the AOA
- The Amyotrophic Lateral Sclerosis “Lou Gehrig’s Disease” Registry Act
- The Christopher and Dana Reeve Paralysis Act
- The Stroke Treatment and Ongoing Prevention Act
- The “MOTHERS” Act to combat postpartum depression and related conditions.
- The Prenatally and Postnatally Diagnosed Conditions Awareness Act to aid individuals and families impacted by Down syndrome.

Following the vote, the AOA Washington office team contacted Senate Majority Leader Reid’s office as well as the Senate sponsors of the Vision Care for Kids Act – Sens. Kit Bond (R-Mo.) and Chris Dodd (D-Conn.) – to assess other opportunities to advance the bill this year.

In the weeks that followed, 167 members of Congress added their names as co-sponsors of the legislation, and the U.S. House overwhelmingly approved it last October.

The Vision Care for Kids Act specifically recognizes the link between a child’s healthy vision and the ability to succeed in the classroom. It seeks to establish the first-ever federal grant program – set to be authorized initially at $65 million – to bolster state children’s vision initiatives.

By placing a new emphasis on treatment, the bill is aimed at doing more to ensure that no child in America is left behind due to a preventable or treatable vision problem.

HHS-OIG: MIPPA will not require adjustment of co-pays

Health care providers will not have to retroactively increase Medicare Part B patient copayments in the wake of last month’s Medicare physician fee schedule adjustments, according to the U.S. Department of Health & Human Services Office of Inspector General (HHS-OIG).

To encourage prudent use of Medicare-covered services, federal law requires health care practitioners charge Medicare Part B patients copayments (generally 20 percent) based on the Medicare-authorized reimbursements for any services provided.

The recently enacted Medicare Improvements for Patients and Providers Act (MIPPA), which retroactively increased Medicare Part B physician reimbursements for services provided during early July (see related article), also effectively retroactively increased the copayments required for those services, the HHS-OIG noted in a recent bulletin.

Clarification

The Medicare Improvements for Patients and Providers Act, passed by Congress last month, authorizes incentives for e-prescribing under Medicare. An article in the July AOA News incorrectly indicated the incentives would be limited to Medicare Part D.

Federal regulations issued last year implementing the Medicare Modernization Act (MMMA) require all computer-generated prescriptions for Medicare Part D to comply with the National Council of Prescription Drug Programs Script standard and thus be transmitted electronically and not by computer-generated fax, starting Jan. 1, 2009.

Optometrists can determine if they are ready to issue pharmaceutical prescriptions electronically under Medicare using the new Electronic Prescribing Readiness Assessment site, www.GetRxConnected.com/Optometric.
Santiago named first dean of Arizona College of Optometry

Midwestern University (MWU) announced the appointment of Hector C. Santiago, O.D., Ph.D., as the inaugural dean of the new Arizona College of Optometry, scheduled to open in August 2009.

For the past 24 years, Dr. Santiago has served at the Inter-American University of Puerto Rico School of Optometry, where his career included positions as the assistant dean of Student Affairs, dean of Academic Affairs, and, since 1997, dean of the school.

"Dr. Santiago is a great addition to the administrative team of Midwestern University," said Kathleen H. Goepfinger, Ph.D., president and chief executive officer.

"He brings a wealth of knowledge and educational experience and quality programs and has an outstanding track record as an academic and administrator. His past experience as dean of the Inter-American University of Puerto Rico School of Optometry will help Midwestern University establish an outstanding educational opportunity for our students, a role model for our new faculty, and an exceptional new college." Dr. Santiago earned his Ph.D. from the University of Texas Graduate School of Biomedical Sciences, completed a National Institutes of Health fellowship, and received his doctorate in optometry from the New England College of Optometry. He is an accomplished researcher, has published extensively, and is active in a number of national associations, including the Association of Schools and Colleges of Optometry, where he served as president last year.

Internationally, Dr. Santiago has been an invited lecturer in more than 12 countries and currently serves as secretary-treasurer of the Latin American Association of Optometry and Optics.

Midwestern University’s new Arizona College of Optometry will be the only optometry program in the state, and only one of 19 in the country.

Midwestern University is a graduate degree-granting institution specializing in the health sciences with seven colleges and two campuses—Illinois and Arizona.

The Arizona campus, located on a 144-acre site in Glendale, is home to more than 1,700 students and five colleges: the Arizona College of Osteopathic Medicine, the College of Pharmacy-Glendale, the College of Health Sciences, and the College of Dental Medicine, and the Arizona College of Optometry.
## Half of ODs’ patients now in managed care

Almost four out of five patients (79.6 percent) in the typical optometric practice are now covered by public or private insurance plans, according to the AOA’s 2008 Third-Party/Managed Care Survey.

The survey finds that fully half (50.5 percent) of optometrists’ patients are now covered under private insurance plans (up from 48 percent two years ago), with another 29.1 percent covered under government health plans such as Medicare or Medicaid (up from 28.5 percent).

In addition, the survey finds that, for the first time, public and private managed care plans account for just over half (50.9 percent) of the patients in the typical optometric practice.

The AOA Information & Data Committee conducts Third-Party/Managed Care Surveys every two years to track growth in insurance coverage for optometric services. Results of the latest survey, reflecting practice conditions in 2007, were released last month.

Survey respondents widely reported that they have increased participation in both managed care and traditional fee-for-service plans over the past two years.

Almost two-thirds (65.3 percent) of survey respondents report they are seeing more patients as a result, and half (50 percent) say gross revenues have increased.

However, only a third (35.5 percent) of responding optometrists said they are realizing greater net income, according to the survey.

That is because, as a result of that increased managed care participation, more than half (58.8 percent) of patients in a typical optometric practice now receive discounts on eye examinations. Those discounts now average 29.4 percent, the survey finds.

In addition, almost half of optometric patients now receive discounts on their eyewear — averaging almost one-third (31.9 percent) off — and that discounting increasingly extends to contact lenses.

Fortunately, according to AOA Information & Data Committee Chair Richard C. Edlow, O.D., the survey also shows optometrists continue to provide a growing range of both eye and vision care services under third-party plans (see related article).

Vision Service Plan (VSP) remains the dominant third-party plan in the typical optometric practice, accounting for 22 percent of patients and 18 percent of revenue (see box).

Medicare remains the most important public sector plan in optometric practices with its fee-for-service and managed care plans together accounting for a total of 17.7 percent of patients and 15.7 percent of revenues.

Although Medicare managed care practices have been widely promoted to patients over recent years, optometric practices have seen only modest increases in patients or revenues associated with those plans, the survey finds.

The AOA’s 2008 Third-Party/Managed Care Survey was based on a stratified sample of 4,000 AOA members who were sent the survey in April 2008. Responses reflect practice conditions during calendar year 2007.

The response rate for the survey was 10.7 percent.

### Optometry’s role in managed care continues to grow

“Optometrists continue to provide more eye care — in addition to vision care — under third-party plans,” notes Richard C. Edlow, O.D., chair of the AOA Information & Data Committee. “And, they are providing more eye care under managed care plans as well as under fee-for-service plans.”

In addition to providing routine eye examinations under managed care plans, nine out of 10 optometrists (90.3 percent) provide contact lens services, according to the AOA’s 2008 Third-Party/Managed Care Survey.

Almost four out of five (78.8 percent) dispense eyeglasses or contact lenses to managed care patients.

### InfantSEE® continues outreach to “mommy bloggers”

Online “mommy bloggers” continue to express interest in spreading the word about infants’ vision and the InfantSEE® program.

At the request of two bloggers, InfantSEE® is developing a “badge” — a graphic with the InfantSEE® logo that serves as free advertising and links back to the InfantSEE® Web site.

It will soon be available for bloggers and InfantSEE® providers alike.

Optometrists who would like to add the badge to their Web sites should send a request to infantsee@aoa.org.

On Sunday, June 8, InfantSEE® Committee Chair Scott Jens, O.D., participated in a live interview via the Web with MumsTheWord.com founders Laura and Amy.

Listen to their interview at http://www.blogtalkradio.com/mumstheword.

InfantSEE® welcomes every opportunity to collaborate with moms who blog because their online medium through conversation and information sharing helps get the word out about InfantSEE® to more and more moms.
Older treatment may be more effective in preserving sight for some patients with diabetes

A promising new drug therapy used to treat diabetic macular edema proved less effective than traditional laser treatments in a study funded by the National Eye Institute (NEI), part of the National Institutes of Health (NIH).

The study, published online in July in the journal *Ophthalmology*, demonstrates that laser therapy is not only more effective than corticosteroids in the long-term treatment of diabetic macular edema, but also has far fewer side effects.

Between 40 and 45 percent of the 18 million Americans diagnosed with diabetes have vision problems, such as diabetic macular edema. Starting around five years ago, early reports of success in treating diabetic macular edema with injections of a corticosteroid called triamcinolone led to the rise in popularity of this alternative therapy.

This is the first study to compare the long-term benefits of both treatments and evaluate their potential side effects. While triamcinolone was used in this study, there is no scientific rationale at this time that one corticosteroid preparation should be substantially different from another.

"Results of this study should confirm the use of laser treatment for diabetic macular edema and will have a significant impact on quality of life for tens of thousands of people being treated for diabetic macular edema in the United States each year," according to Paul A. Sieving, M.D., Ph.D., director of the NEI.

Only diabetic macular edema was examined as part of this study. Macular edema from conditions other than diabetes may respond to corticosteroid treatment and laser treatment differently.

A total of 693 patients with diabetic macular edema participated in the study at 88 sites across the United States. Each person was randomly assigned to corticosteroid or traditional laser treatment. Following the treatment, investigators tested each patient to determine whether the procedure had prevented substantial vision loss. Investigators defined substantial vision loss as reading at least two less lines on a standard eye chart two years after entering the study.

In the corticosteroid-treated group, 28 percent experienced substantial vision loss as compared to 19 percent in the laser-treated group. In addition, about one-third of the eyes treated with laser therapy showed substantial improvement in vision. Laser treatment had previously been perceived to prevent further vision loss, but not to improve vision. Improvements in vision were not found in the only prior study evaluating laser treatment for diabetic macular edema because most subjects enrolled in that study already had good to excellent visual acuity and, therefore, no room to improve.

"Many of the investigators were surprised by the results," said Michael Ip, M.D., associate professor of ophthalmology at the University of Wisconsin, and chair of this protocol for the Diabetic Retinopathy Clinical Research Network.
Glaucoma van reaches patients throughout Chicago area

The Illinois Eye Institute (IEI) is enthusiastically serving patients with the help of a glaucoma van for the summer.

Staff uses the mobile van to travel up to 75 miles away from Chicago educating patients on the risk factors for glaucoma and other eye diseases and performing free assessments.

Rep. Danny Davis (D), of the 7th District of Illinois, helped IEI get the van through the Friends of the Congressional Glaucoma Caucus Foundation beginning in April.

IEI is the clinical division of the Illinois College of Optometry (ICO) and works with physicians from the Chicago Eye Institute and the University of Chicago's Department of Ophthalmology and Visual Sciences.

"Through this project we are building bridges with the community leaders and legislators," said Vince Brandys, O.D., director for Professional Relations and manager of the Glaucoma Van Project.

As part of the screenings, ICO students and IEI doctors take case history, check blood pressure, assess visual acuity, conduct frequency-doubling technology (FDT) visual field testing, use tono-pens and observe the optic nerve head.

"A lot of the patients are kind of shy, but when they realize what we're doing, they are on board to do it," said Emily Thompson, a third-year optometry student, who helps staff the glaucoma van.

The staff recommends patients have routine ophthalmic exams every one to two years and refers some patients for ophthalmologic or glaucoma consults based on their findings.

After the visit, patients, the glaucoma caucus and doctors all get copies of the assessment forms.

"It's partly education, but it's also a way to detect debilitating disease," said Dr. Brandys. "We've already diagnosed one patient with pituitary adenoma and others with cataracts and diabetic retinopathy."

With three technicians and two doctors, the van processes 15 patients an hour.

The van has a literature in both English and Spanish and has even made a visit to Chinatown with four translators. At that visit, the staff performed 126 screenings, which is the highest number since April.

Everything through the Glaucoma Van Project is free.

"People are uninsured, so they are very appreciative," said Dr. Brandys.

"One woman was so grateful, she just kissed my hand. They're so happy. It's a great public service."

Many patients suffer from underlying diseases that contribute to their eye problems, and the VOHHA connects these patients to primary health care providers.

"We see a lot of patients come in who don't realize that systemic diseases affect the eyes," said Dr. Brandys.

"Through this project we are building bridges with legislators and the community."

Patients with Medicare can also receive annual glaucoma screenings, which are a paid benefit since 2002 when the Congressional Glaucoma Caucus successfully helped pass H.R. 5543.

The success of the IEI Glaucoma Van Project is due in part to help from sponsors Advocate Health Centers, which donated $10,000, and Access Community Health, which donated $2,500.

Dr. Brandys also credited Rep. John Boozman, O.D., (R-Ark.) and his health care staff member Kathie Fucchiano for their help securing the van.

Paraoptometric of the Year honored

AOA Immediate Past President Kevin Alexander, O.D., Ph.D., presented the 2008 Paraoptometric of the Year Award to Beverly Roberts, CPOA, the president of the Mississippi Paraoptometric Association.

She is also active in the Mississippi Optometric Association (MOA) and the American Optometric Association.

She serves on the MOA's Education Committee and on the Summer Conference Committee as a paraoptometric representative.

She is a regional leader on the AOA State Relations Committee.

Roberts contributes articles to the MOA's newsletter and participates in community-wide medical fairs in Magee, Mendenhall, and Mount Olive, with an emphasis on reaching elderly patients who have little or no access to proper health or eye care.

She has participated in a student health fair and focused on the field of optometry. She has also participated in a vision screening program for medical doctors in the area.

Roberts also has experience in organizing vision screenings for students who had never had received vision care. The program was so well received that the school asked her to return to screen other age groups.

Roberts also devotes her time to serving as an elementary school reading tutor and mentor, serves in various capacities in her church congregation, and coaches YMCA softball.

AOA Immediate Past President Kevin Alexander, O.D., Ph.D., presents the 2008 Paraoptometric of the Year Award to Beverly Roberts, CPOA, the president of the Mississippi Paraoptometric Association.
Faculty share ideas at Optometric Educators’ Exchange

The third Optometric Educators’ Exchange (OEE) brought together 41 optometric educators from across the United States and Canada for a full-day program June 27 at Optometry’s Meeting. The program, built especially for optometric faculty by the AOA Faculty Relations Committee, offered a selection of informative lectures and the chance for participants to share information and experiences with each other in an intimate roundtable format.

Many attendees echoed the thoughts of post-program survey comments indicating the most valuable aspects of the day were "relevant lecture topics" and "discussion with colleagues who have similar experiences."

### Key messages

As part of the satellite media tour, there were key points that Dr. Press and Bill Nye conveyed:

- **For most children, good vision is critical for almost all classroom tasks.**
  - Without healthy vision, students can face unnecessary challenges not only in the classroom, but also to their mental, physical, social and emotional well-being.
  - Ten million school children in America have undetected or undiagnosed vision conditions that can negatively affect learning. Sadly, awareness of this issue is very low.
  - According to the American Eye-Q® survey, 87 percent of respondents were unaware that one in four children have a vision problem.

- **One of the most important things a parent can do to help their children succeed in school is to take them for a comprehensive eye exam.**
  - Vision screenings are not diagnostic and, consequently, do not necessarily lead to correction of problems; in reality, screenings only indicate a potential need for further care and they miss problems in many children.
  - Eye exams are important because many conditions, especially chronic and systemic diseases and developmental problems, cannot be detected through an eye screening. As with all preventive health measures, it’s important to have early and regular eye exams so that any problems can be diagnosed and treated at the onset of the condition.
  - There is no reason to have even one child – let alone thousands – slip through the cracks and never reach their full potential because of preventable and treatable vision problems.
  - During a comprehensive eye exam, an optometrist will evaluate several areas of a child’s vision to ensure that learning is maximized through good vision. These areas include:
    - Visual acuity measured at several distances;
    - Focusing and accommodation skills;
    - Visual alignment and ocular motility;
    - Eye teaming and tracking skills;
    - Color recognition;
    - Eye-hand coordination and
    - Overall eye or ocular health.

Early detection and treatment of vision disorders provides the very best opportunity to treat and correct problems to help children see clearly.

- If vision skills are lacking or the eyes are not functioning properly, it can lead to uncomfortable symptoms that can hinder a child’s ability to learn. According to the American Eye-Q® survey, only 39 percent of adults understand that behavioral problems can be an indication of vision problems.

- The American Eye-Q® survey showed that 57 percent of children did not receive their first eye exam until age 5 or older. The longer a parent waits to take a child in for a comprehensive eye exam, the more difficult it is to treat a problem. In some cases, permanent damage may be done and irreversible vision loss may have occurred.
Take control of your future with AOA-Sponsored Insurance Programs.

Professional Liability Insurance

- In today's increasingly litigious society, you need to take control of the most important things in your life—yourself, your family and your career—should you be named in a malpractice claim or lawsuit.
- ★ Policy limits up to $2,000,000.00 per occurrence and up to $4,000,000.00 per annual aggregate
- ★ Per occurrence coverage no matter when a claim is filed (as long as the incident took place while the policy was in force)
- ★ Premium credits for group practices
- ★ Lost wage reimbursement
- ★ Defense reimbursement due to licensing board complaints

For more information about Professional Liability, call:
1-800-503-9230

The Business Owner's Package

- Protect your entire business with outstanding coverage including Property and General Liability at competitive rates—with no additional charge for coverage for your employees. What's more, workers compensation coverage does not need to be placed with our office in order for us to provide Professional Liability coverage.

Automatic coverage includes:
- • Glass (interior & exterior)
- • Theft
- • Money & securities
- • Accounts receivable
- • Property of others
- • Computer equipment, including software

All coverages are subject to the terms and conditions of the policy. Professional Liability insurance is underwritten by Chicago Insurance Company, a member company of the Fireman’s Fund Insurance Companies.
AOA to host upcoming EHR seminars

With federal regulations changing quickly and new technology moving even faster, it is vitally important for ODs to make informed decisions concerning EHRs. These seminars will give ODs and office staff the practical tools and hands-on experience to make the best decision for their offices.

Speakers will include Kim Castleberry, O.D., Philip J. Gross, O.D., Kelly Kerksick, O.D., Francis McVeigh, O.D., Scot Morris, O.D., and Kirk L. Smick, O.D.

Presentations will cover what ODs need to know to comply with federal standards and how health information technology may affect future reimbursement.

Other presentations will cover all aspects of implementing EHRs in a practice, interoperability and security issues related to EHR products, and guidance on what to consider when investing in EHR and e-prescribing products, as shared by optometrists who have already adopted health information technology.

Attendees at the first AOA EHR conference in February rated the meeting highly.

v “Excellent to hear personal experiences!”

v “Great meeting, worth every cent and minute.”

v “Very well thought out and excellent program! Very informative! Saved me a lot of time to attend this seminar versus spending time on researching vendors on my own.”

Confused about the transition from paper to pixels? Then mark your calendar for one of the AOA’s upcoming “Building the Paperless Practice” electronic health records (EHR) seminars.

Upcoming EHR conferences will be held Dec. 5-6 in Baltimore, Md., and Feb. 20-21, 2009, in San Francisco.

Now that this week is filled...
What are your plans for the year 2037?

Affordability and ease of administration that fit most practices. With thousands of participants, the AOA Members Retirement Program is able to offer you a retirement program with affordable start-up and administrative fees. Many competitors claim to save you time and money, but few can offer you the values you’ll find both at start-up and when your plan is up and running.

Our Members Retirement Program Specialists work regularly with optometrists and are most familiar with the specifics of running their practices. A Retirement Program Specialist, dedicated to professional practices such as yours, can take you step-by-step through the plan design process, answering your questions on enrollment, employee participation, tax savings, investment options and more.

A wide array of 401(k) choices that can improve your ability to save for retirement and reduce employee expense.

The AOA Members Retirement Program makes it easy and affordable to establish and maintain a 401(k). You’ll have the flexibility to establish one of several plans (Traditional, SIMPLE, or Safe Harbor) where you can contribute pre-tax dollars and have a choice of how you make your employee contributions. Or if you have zero employees, an Owners 401(k) may be the right fit for you.

Call your AOA Members Retirement Specialist today at (800) 523-1125.

Kanellos remembered

William E. Kanellos, O.D., died July 12, 2008, of heart failure. A five-time recipient of the Nevada State Optometric Association’s optometrist of the year, Dr. Kanellos was the first optometric consultant to the state’s Welfare Division. He was active in politics and was key person to several senators and members of Congress.

Within AOA, his offices include chairing the Committee on Congress and Conferences and chairing the executive committees of the Administrative Division and the Membership Service Division. Past AOA President Tim Kime, O.D., notes that Dr. Kanellos was universally liked and made immense contributions to the profession.
Optometrist earns leadership role in military transformation

U.S. Navy Rear Adm. Michael H. Mittelman, O.D.

Optometrist – in fact, the first non-medical doctor – ever to become chief medical officer of the Joint Forces Command.

Dr. Mittelman is the first optometrist – in fact, the first non-medical doctor – ever to become chief medical officer of the Joint Forces Command, and he acknowledges his new job is “a long way from the eye exam lane.”

However, he contends his training as an optometrist has prepared him well for his assignment.

“I think we, as optometrists, have represented ourselves quite well as administrators in health care. As optometrists, we are trained to listen, observe and determine facts, and therefore should be pretty good at analyzing situations. Throw in a little common sense and you can have a good administrator,” he said.

Currently the U.S. Navy’s director of medical resources, plans and policy, Dr. Mittelman will oversee the mission of leading the medical transformation of the armed forces of the United States,” an official U.S. Joint Forces Command statement notes.

The Joint Forces Command is charged with integrating operations among the Army, Navy, Air Force and Marines who are involved in joint operations under all nine of the U.S. military’s combatant commands around the globe.

In that capacity, he will also become the surgeon for the NATO Allied Transformation Command, meaning he will play a critical role in coordinating care for military personnel from other nations.

That in itself is a massive job, those close to the command acknowledge. The Joint Forces Command is in charge of providing health care for the more than 1.16 million active and reserve Army, Navy, Air Force and Marine personnel, civil servants and contact employees involved in command operations.

However, that will represent only half of Dr. Mittelman’s responsibilities.

By virtue of its mission, the command has also been charged with overseeing a transformation of the armed forces to meet defense needs in the 21st century.

As command surgeon, Rear Admiral Mittelman will oversee the mission of leading the medical transformation of the armed forces of the United States, an official U.S. Joint Forces Command statement notes.

The Joint Forces Command is charged with integrating operations among the Army, Navy, Air Force and Marines through a four-part program of joint concept development and experimentation, joint training, and joint capabilities development, as well as providing joint forces.

Dr. Mittelman will have responsibility for all four of those missions with respect to health care.

As the Navy’s chief Medical Service Corps officer and the first active-duty military optometrist ever to attain “flag grade” (admiral or general) rank in any branch of the American military, Dr. Mittelman already has an extensive resume.

He became the first optometrist ever to be designated as an Aerospace Optometrist in 1989.

He was also the first optometrist ever to command a Navy tertiary care hospital, becoming Commanding Officer of Navy Fleet Hospital Three in 1995 and, in 2000, assuming command of the U.S. Naval Hospital Okinawa, Japan.

After assuming command of the Naval Ophthalmic Support and Training Activity at Yorktown, Va., in July 1997, Dr. Mittelman facilitated the establishment of the Department of Defense Optical Fabrication Enterprise, which provides optical services to military personnel in all branches of the military.

New types of conflicts, which in some cases may not involve traditional armies from nation-states.

For that reason, in place of the massive forces associated with the Invasion of Normandy, the military is increasingly transitioning to the development of specialized forces that can respond quickly when conflicts arise.

U.S. military health care is responding to the new environment in much the same way, Dr. Mittelman said.

Modular approach

In the past, the military has made it policy “to set down a heavy health care footprint” in a theater of operations, ready to provide whatever care might be needed, Dr. Mittelman said. “In order to be more agile, we are now being asked to provide smaller, more mobile assets with specific capabilities. It’s a more modular approach to health care.”

For example, the present operations in Iraq are producing demand for mental health care. Dr. Mittelman will be charged with ensuring that such care is available when those troops return to garrison.

Today, deploying military health care personnel “is a matter of the ‘right fit,’ providing the right personnel who have the right training and the right skills to respond,” Dr. Mittelman said. “And the ability to report back the lessons learned.”

In addition, military leaders now recognize that change is likely to be a constant, with U.S. forces facing new weapons and tactics on an increasingly frequent basis, Dr. Mittelman said.

For that reason, military leaders now review the “less-
Military,
from page 13
sons learned” following each major operation and constantly revise military doctrine to reflect them.

As the Joint Forces Command’s chief medical adviser, Dr. Mittelman will now have responsibility for the assessment of lessons learned and subsequent revision of military doctrine related to health care. A major part of his new charge, Dr. Mittelman notes, will be the development of innovative new policies and procedures in military health care.

“I’ve got the responsibility to think outside the box and try new things in the future in line with the ever-changing rules of warfare,” he said.

“I’m forever grateful for the education I received at the Pennsylvania College of Optometry.”

There, the future admiral first became interested in public health under the tutelage of Anthony F. DiStefano, O.D., M.P.H. (who is now the college’s vice president and dean for academic affairs).

Dr. Mittelman was also a student of Thomas L. Lewis, O.D. (then PCO’s president) who “helped to teach me how to think out of the box.”

ACOE honors Nyre

The Accreditation Council on Optometric Education (ACOE) honored Robert Nyre, O.D., at Optometry’s Meeting® as he retired from the council.

Dr. Nyre, who is from Minot, N.D., has served on the ACOE for nine years. He was nominated to the council by the Association of Regulatory Boards in Optometry (ARBO), which nominates two of the 11 ACOE members.

“We have been privileged to work with Bob on the Council,” said Larry D. Stoppel, O.D., ACOE chair from Washington, Kan. “His service to optometry, to optometric education and to the country has been outstanding. I am proud to call him my friend and colleague.”

In addition to serving as a council member and participating in accreditation site visits to schools and colleges of optometry, optometric residency program and optometric technician programs, Dr. Nyre has also chaired the ACOE’s Leadership and Professional Development Committee and served as a member of the council’s Optometric Technician and Professional Optometric Degree Committee.

Dr. Nyre has a long history of service to the profession. He has served as a member and president of the North Dakota Optometric Association, the North Central Optometric Council and the North Dakota State Board of Optometry.
NOW AVAILABLE, THE UPDATED
Codes for Optometry and CPT Standard Edition two book set

"The" Coding Tools For Your Optometric Practice

Codes For Optometry 2008 is an extensive listing of the codes that you need to make sure that your Medicare and third-party insurance claims are submitted properly. It is an invaluable aid for you and your staff in identifying diagnosis, procedure, material codes and speeding up administrative procedures. This perfect bound book is divided into four sections with both alphabetical and numeric listings for easy use.

- Material Codes, Health Care Financing Administration's Health Care Procedural Coding System (HCPCS)
- Medicare's National Correct Coding Initiative (CCI) Edition

Codes For Optometry also includes both the 1995 and 1997 Documentation Guidelines For Evaluation and Management Services.

CPT® 2008 Standard A.M.A. a $71.95 value

Easy to use, easy to read. The 2008 edition of the AMA's Current Procedural Terminology (CPT®) official coding reference contains all CPT codes, modifiers and guidelines for 2008. Our perfect bound book is the only one in the market with official CPT coding rules and guidelines developed by the CPT Editorial Panel and used to define items that are necessary to appropriately interpret and report medical procedures and services.

The Standard Edition features an efficient two-column format and an extensive index to help locate codes by procedure service, organ, condition, eponym and synonym, and abbreviations.

Order both books, item #ODE13: Special Member Price $118.00*  Non-Member Price $155.00*

*All shipping and handling, and applicable sales tax, will be added.

Industry Profile:
Luxottica Group

The eye care professional plays a vital part in the patient's decision on how to protect his or her eyes from the sun’s harmful ultraviolet (UV) rays.

The Luxottica Group takes all knowledge gained from the testing of the retail environment and tailors that knowledge to the needs of the eye care professional in the new Sunwear Destination Program, Simply Sun.

Simply Sun aids the eye care professional by using high-end display and marketing materials to maximize sun protection awareness for patients.

We at Luxottica believe that the power of fashion, branding, and sunwear as a stylish and cool accessory (rather than a medical device) makes it even more important for eye care professionals to be attuned to new, more effective ways of presenting the sunwear message—both plano and especially prescription—to their patients.

Every patient needs quality sunwear, whatever the lifestyle, all individuals need 100 percent UV protection and support in their sunglasses.

Simply Sun is a comprehensive destination sunwear program designed to help eye care professionals to promote the prevention of these UV-associated eye diseases by using brand visibility, training, consumer education, dedicated point-of-sale material and advertising to enhance opportunities for the eye care professional to increase profits.

This program optimizes opportunity by turning the patient's needs into wants.

Working together with Simply Sun

Simply Sun features 'power brands' that make eye health cool, fashionable, and fun.

There is a broad selection of styles for every fashion taste. Matching the right brand to each patient will enhance the likelihood that the patient will not only buy the glasses, but will also wear them.

For example, the Vogue brand is fresh, youthful, lively, and playful, and its spokesmodel is the glamorous Gisele Bündchen. This brand is perfect for a teenage girl who is looking to not only wear glasses for sight, but for fashion.

Also, Persol, the brand James Bond wears in the movies, is a great motivator for purchase and wear for the action-oriented man, just as Ralph Lauren is perfect for the affulent modern woman who embraces classic style.

Included in the Simply Sun package is:
△ Staff training
△ Consumer education materials
△ Eye-catching displays
△ Attention-attracting signage, banners, and other points-of-purchase

We invite you to join us in this quality program and educate the consumer on the importance of protecting their eyes from harmful UV rays.

For more information on Luxottica’s new Simply Sun program, contact Anthony Vetere at 516-918-3063.

Industry Profile is a regular feature in AOA News allowing participants of the Ophthalmic Council to express themselves on issues and products they consider important to the members of the AOA.

Shown is DKNY 4578, a feminine optical model with a metropolitan line. “Modern and assertive, this style becomes a fashion statement with its small shape, oval lenses and a mask that curves softly at the ends,” says Luxottica. The linear arms display a decorative pattern of bands that develops along their entire length. Color variations include dark orange/orange, maroon/pink, and black/ice. www.luxottica.com

First Insight software integrates with DrFirst for launch of e-prescribing solution

First Insight Corporation, a practice management and electronic medical records (EMR) software company, and DrFirst, a leader in electronic prescribing (e-prescribing) and medication reconciliation, announced the launch of a true “end-to-end” e-prescribing solution.

First Insight’s software integration with DrFirst’s GoldRx™ certified Rcopia™ e-prescribing technology allows maximEyes users to submit regulatory-compliant e-prescriptions to pharmacies through a real-time, fail-safe, clinical transaction network.

Rcopia allows doctors and staff to work in both wired and wireless environments.

“First Insight has demonstrated its leadership in this industry by bringing the benefits of electronic prescribing to eye care professionals,” said G. Cameron Deemer, president, DrFirst, Inc.

“We value their forward-thinking commitment to providing high-quality information tools to improve the prescription-writing process for their providers and patients,” Deemer said.

“DrFirst’s industry-leading technology and commitment to complying with state, federal, and local government prescribing regulations will be a huge benefit to maximEyes clients,” said Nitin Rai, president and CEO of First Insight.

“The e-Prescribe Link will allow doctors to be one step ahead of electronic prescribing mandates, provide a higher level of patient service and safety by minimizing potential adverse drug events, and will increase staff productivity due to less time spent with pharmacy questions and renewal requests,” Rai said.

Case studies suggest a savings of up to two hours per day for office staff with a faster, one-click, multi-prescription renewal process.

For additional information, visit http://www.first-insight.com/downloads/e-prescribe_features_and_benefits.pdf.
VisionWeb partners with AOA, announces affiliate royaltiess

VisionWeb announced an agreement with the AOA to provide support and sponsorship of AOA marketing initiatives to drive membership and participation in practice-building programs through 2009. The company also announced an increase in earnings for affiliates in the royalty program.

Under the terms of the agreement, VisionWeb will collaborate with the AOA to develop marketing campaigns targeted at more than 20,000 eye care providers who are current VisionWeb members.

VisionWeb will provide creative services and manage marketing campaign activities in exchange for recognition as an AOA silver-level corporate sponsor.

The AOA and VisionWeb have been aligned since the establishment of the equity affiliation agreement in 2003. The AOA is represented among the VisionWeb Board of Directors and provides strategic guidance to the VisionWeb executive team.

Other collaborations include the VisionWeb AOA Royalty Program, which provides new discount revenue for participating AOA state affiliates, and membership on the AOA Ophthalmic Executive Council for the fifth consecutive year.

State revenue

Over the 12-month period ending in May, 31 AOA state affiliates earned a total of $47,053 in royalties from eye care product orders on VisionWeb.

Royalties grew 35 percent over the same period ending May 2007, representing the largest royalty payout to date during the five-year history of the program.

“This program demonstrates VisionWeb’s dedication to supporting independent optometry and commitment to providing practice-building tools for AOA members.”

Royalty Program can contact Jessica Clark, director of Marketing and Business Development for VisionWeb, at 512-241-8561.

Yamane to retire

Stan Yamane, O.D., vice president of professional relations for VisionWeb, will retire effective Aug. 31.

“Since 1995 I have experienced the joy of caring for patients in my private practice, the thrill of working with VisionWeb to successfully launch the disposable contact lens concept, and the honor of helping my colleagues improve the way they do business through the use of technology,” said Dr. Yamane. “It has been especially rewarding to work with VisionWeb where the collective goal is to improve the profession of eye care. I would like to thank my many colleagues for their ongoing support and dedication to helping the eye care industry reach its full potential. My retirement is the culmination of an exhilarating career and I am anxious to embark on my life’s next big adventure.”

“Stan Yamane has long been, and will remain, a very dear friend and colleague. His contribution to the eye care industry is truly immeasurable. VisionWeb is fortunate to have been influenced by his creativity and vast understanding of the needs of the eye care practitioner,” said Saddington. “I speak for everyone at VisionWeb when I say that we are all fervent admirers of Stan Yamane. He has been an enthusiastic member of the VisionWeb team and we are honored to cheer him on as he enters this new, very well deserved, chapter of his life.”

Vision-Ease Lens (VEL) expanded its line with the launch of its Continua® semi-finished single vision (SFSV) 80mm lenses.

This new extension signifies VEL’s commitment to provide the most versatile polycarbonate lens line for a wide variety of processing applications, according to VEL. Continua SFSV 80mm lenses are available in a number of base curves, including 0.50, 1.00, 2.00, 3.00, 4.00, 5.25, 6.25, 7.50, 8.50 and 9.75. With a prescription range of +8.00 to -12.00, these lenses accommodate a variety of patient needs.

Featuring highly abrasion-resistant, thermal-hard coating, the new Continua lenses are compatible with all anti-reflective coating applications. The backside tints to a sunglass state and provides 100 percent protection from ultraviolet rays.

Optometry
Geisinger Health System seeks a licensed optometrist to join its growing practice at Geisinger-Wyoming Valley Medical Center in Wilkes-Barre, PA.

About this position:
- Work with an ophthalmologist and a support team of nurses and technicians within Geisinger’s large, multi-specialty Ophthalmology service line.
- Assist with inpatient consultations
- Opportunity to work with collegial staff and create new programs
- Growing department now features Pachymetry, OCT, Fundus Photography, HVF and offers Fluorescein Angiography with in-house eye care contact lens center
- Support staff includes: 2 LPTA’s, Ophthalmic Tech/Photographer, Ophthalmic Tech and Dispensing Optician

For more information, please contact Anum Kline, Physician Recruiter, at 1-800-845-7112, email: sumkline@geisinger.org or visit www.geisinger.org/docjobs

College of Optometry
Western University of Health Sciences, a thriving center for health care and veterinary education in Pomona, California, is a leader in nine colleges – Optometry, Dental Medicine, Podiatric Medicine, Graduate Biomedical Sciences, Allied Health, Graduate Nursing, Osteopathic Medicine, Pharmacy, and Veterinary Medicine. The University values a diverse community and is committed to unparalleled excellence in its faculty, staff and students (www.westernu.edu).

The Western University College of Optometry seeks applicants for didactic and clinical faculty with a variety of interests to participate in the development and implementation of its curriculum. Candidates should have a record of distinguished academic accomplishments and a passion for excellence in teaching, scholarship, service, leadership, and/or patient care, all applicable.

Job description will vary with the expertise and credentials of each successful candidate and may include a combination of teaching, scholarship, and patient care opportunities. Faculty rank will be commensurate with experience and expectations of future accomplishments.

Salary and benefits are competitive. For clinical faculty, requirements include a license to practice optometry in California. The University has the ability to obtain such license within one year of appointment.

Applicants should submit the following to Daniel Kurtz, PhD, OD, Associate Dean of Academic Affairs, Western University College of Optometry, 309 E. Second St., Pomona, CA 91766-1854, dkurtz@westernu.edu.

- A cover letter explaining how the applicant’s background meets the requirements for a faculty position including examples of teaching experience, philosophy, and goals.
- A current curriculum vitae
- A completed Employment Application found at http://www.westernu.edu/bin/hr/pdf/application_for_employment.pdf

Positions will remain open until filled.

 Pence.

of the country poverty-stricken northern region. VOSH is asking all U.S. optometrists to check their in-office labs for any excess or obsolete plastic lenses they might be willing to donate to the cause. We need single vision or spherical bifocal plastic lenses. Our lab cannot process glass lenses so those are not needed. VOSH is also accepting new unused spectacle frames for use in the lab. Please call 800-300-4690 to arrange free UPS ground shipment of your unused inven-

tory. Those lenses could make a poor Nicaraguan see and become a more productive member of society. VOSH is also soliciting donation of used ophthalmic equipment to equip clinic sites. Contact information can be found on www.bookwish.org.

Find your optometric niche.

The OEP Clinical Curriculum Courses can help you distinguish yourself in your community! Call 800 447 0370.

I NEED FRAMEs, temple stems, bridges stamped 1/100 12K/GF gold-filled. New, old stock, or Used, Full, Semi, or Rimless styles. Contact GF Specialties, Ltd. 800/951-6936.

CLASSIFIEDS

Classified Advertising Information

Effective the October 9, 2006 issue onwards, Classified advertising rates are as follows: 1 column inch = $60 (40 words maximum) 2 column inches - $110 (80 words maximum) 3 column inches = $150 (120 words maximum). This includes the placement of your advertisement in the classified section of the AOA Member Web site for two weeks. An AOA box number charge is $30 and includes mailing of responses. The envelope will be forwarded, unopened, to the party who placed the advertisement. Classifieds are not commissionable. All advertising copy must be received by e-mail at k.spurlock@eliever.com attention Keida Spurlock, Classified Advertising. You can also mail to the Elsevier, 360 Park Avenue South, 9th Floor, New York, NY 10010.

Advertisements may not be placed by telephone. Advertisements must be submitted at least 30 days preceding the publication. All ad placements must be confirmed by the AOA — do not assume your ad is running unless it has been confirmed. Cancellations and/or changes MUST be made prior to the closing date and must be made in writing and confirmed by the AOA. No phone cancellations will be accepted. Advertisements of a "personal" nature are not accepted. AOA NEWS publishes 18 times per year (one issue only in January, June, August, September, November, and December) and posting on the Web site will coincide with the AOA NEWS publication dates. Call Keida Spurlock — Elsevier ad sales contact - at 212.633.3986 for advertising rates for Classifieds and showcase ads.

One of the leading reasons worldwide for blindness is the simple lack of a pair of glasses. VOSH (Volunteer Optometric Services for Humanity) is dedicated to battling this problem. The organization has medical teams working in the poorest country in Central America, a priority this year. In addition to a number of clinics that VOSH has run in poor rural areas of the country, they are establishing a lens processing lab in the poverty-stricken northern region of the country. VOSH is asking all U.S. optometrists to check their in-office labs for any excess or obsolete plastic lenses they might be willing to donate to the cause. We need single vision or spherical bifocal plastic lenses. VOSH is also accepting new unused spectacle frames for use in the lab. Please call 800-300-4690 to arrange free UPS ground shipment of your unused inventory. Those lenses could make a poor Nicaraguan see and become a more productive member of society. VOSH is also soliciting donation of used ophthalmic equipment to equip clinic sites. Contact information can be found on www.bookwish.org.

SUSTAINED LEVELS OF CONCENTRATION

Delivering concentration above and below the ocular surface

IQUIX® is indicated for the treatment of corneal ulcers. The ocular adverse events occurring in 1%-2% of patients included decreased/blurred vision, instillation site irritation/discomfort, ocular infection, and ocular pain/discomfort. The non-ocular adverse events occurring in approximately 8%-10% of patients were headache and taste disturbance. IQUIX® solution is contraindicated in patients with a history of hypersensitivity to levofloxacin, to other quinolones, or to any of the components in this medication.

Please see brief summary of full Prescribing Information on the next page.

IQUIX® is a licensed trademark of Daichi Sankyo Co., Ltd., Tokyo, Japan. Manufactured by Santen Oy, Tampere, Finland. VISTAKON® is a registered trademark of VISTAKON® Pharmaceuticals, LLC.
